Product features

Catch performance

The HX Series features superb Catch Performance. The most important element in reliable outdoor detector is accuracy in distinguishing a human from a small animal. The exclusive pyro element on board enables the HX to project an ideal detection pattern, thus allowing for more accurate detection of humans and less false alarms.

HX-80N Dual PIR standard model

Adjustability

HX coverage can easily be adjusted by means of built-in flaps and plates.

Flaps for long distance limit

To adjust the long range of detection, set the upper and lower flaps.

Plates for short range masking

To adjust the short range of detection, set the masking plates.

* Plate 1 and 2 are identical.

Slope friendliness

Not all outdoor ground is flat like most indoor environments. Steep slopes can cause negative effects on the catch performance feature. The adjustable bracket included enables the HX to maintain the optimal catch performance.

180° horizontal angle adjustable bracket

Additional Features

- Mounting height 8'2" - 9'10"
- Intelligent AND detection logic with unique pyro-element
